ANORD MARDIX
A Flex Company

Project and lifecycle services and engineering capabilities

THE HOME OF COMPREHENSIVE ENGINEERING EXCELLENCE

Why data center operators choose us?

Data center resilience depends on speed, precision, and control. Anord Mardix delivers a comprehensive service capability designed to protect uptime across the full lifecycle of critical power and supporting infrastructure. Our model combines deep in-house engineering expertise with authorized partners, providing a single, accountable service interface for complex, live operational environments.

We design, manufacture, install, commission, and service our products providing OEM level insight at every stage

Our live working methodologies keep operations running during maintenance

We plan and manage complex shutdowns so our clients don't have to

Every visit results in clear reporting, actionable recommendations, and defined next steps

Our service coverage

ANORD MARDIX
A Flex Company

Service model overview

Our services are structured around four core areas, designed to support critical power infrastructure from first energisation through its full operational life.

Project services

- Commissioning
- Installation
- Integration
- Acceptance testing

Lifecycle services

- Preventative maintenance
- Emergency response
- Extended warranty
- Critical spares

Advanced services

- Power management systems (PMS)
- SCADA and EMS
- Engineering studies
- Environmental monitoring

Training services

- Client product training
- Partner certification
- Operations and maintenance documentation
- System handover and familiarisation

Our clients operate:

- Hyperscale and colocation data centres
- Enterprise and financial services data centres
- Critical facilities where unplanned downtime is not acceptable

ANORD MARDIX
A Flex Company

Project services

Anord Mardix delivers a fully integrated, end to end solution covering design, manufacture, and complete site services for critical power infrastructure. Our capabilities span the full project lifecycle, providing a single, accountable partner from concept through to installation, commissioning, and client acceptance.

Product areas supported:

- Busway systems
- Low-voltage switchgear
- Medium-voltage switchgear
- Prefabricated modular power solutions
- Power monitoring and energy management systems
- Third-party supplier integrated equipment

A structured, phased approach

Each project follows a tiered service framework designed to transition critical power infrastructure from product delivery through to full site integration and final client acceptance. Every level builds progressively on the previous stage, ensuring systems are rigorously validated at each milestone. This reduces delivery risk, accelerates handover, and provides clear, documented assurance of performance and compliance throughout the project lifecycle.

ANORD MARDIX
A Flex Company

Project service levels

Level	Service	What's included
1	**Preliminaries, factory testing and delivery**	Project management, health and safety planning, factory witness testing, delivery coordination, and site logistics
2	**Interconnection and static testing**	Equipment positioning, interconnection, torque verification, insulation resistance testing, continuity testing, dead testing, and labelling verification
3	**On-site commissioning**	Energisation, functional testing of breakers, isolators and protection devices, control wiring verification, I/O point to point testing, cause and effect validation, and UPS and cooling system functional checks
4	**Site acceptance testing (SAT)**	SCADA and HMI integration verification, live data validation, alarm and event testing, metering accuracy checks, fire detection and suppression validation, and commissioning record sign off
5	**Integrated systems testing (IST)**	Cross system integration testing, load shedding and sequencing logic, network redundancy and failover verification, operational scenario simulation, and thermal imaging post energisation
6	**Final acceptance and client handover**	Performance and reliability testing, final start up checks, room integrity verification, client training, documentation handover, and formal project sign off

Additional services available at any stage:

- Secondary injection testing of ACBs and MCCBs with certified documentation
- Post energisation thermographic survey with full colour reporting
- White glove deep cleaning of all switchgear prior to handover
- On-site product and systems training for operations and maintenance teams

Preventative maintenance

Our maintenance strategy is structured to protect uptime while meeting regulatory and manufacturer requirements. We combine live proactive servicing with planned isolated maintenance, ensuring early fault detection without unnecessary disruption. This reduces unplanned outages, allow safer shutdowns, and enables predictable lifecycle planning.

Live proactive service

Annual (As per regulatory guidance)

- Performed without interruption to load
- Thermographic surveys and visual condition assessment
- Identification of thermal, mechanical, and operational risk

Planned isolated maintenance

Every 3–5 years (Depending on asset type)

- Deep mechanical, electrical, and protection testing
- Torque verification and component servicing
- Shutdown planning fully supported by our in house and approved service partner teams

ANORD MARDIX
A Flex Company

Comprehensive power and critical systems coverage

Our comprehensive data center service capability spans electrical power infrastructure, monitoring and control systems. Services are delivered through in-house engineers and our certified partner network, managed under the Anord Mardix service framework, ensuring the right expertise is applied at every stage.

Electrical power infrastructure

- LV proactive live service
- LV isolated service
- HV live inspection
- HV isolated maintenance and transformer service
- ACB and MCCB servicing and secondary injection testing
- Busbar, DATABAR and IBAR non-intrusive maintenance
- Ultrasonic and partial discharge testing

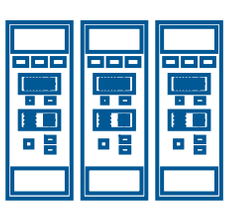

Critical systems

- UPS servicing and emergency response
- Fire detection and suppression maintenance
- Cooling and battery room HVAC maintenance

Modular and micro-FM capability

- Multi-discipline service coordination for modular environments
- Single service interface across power, cooling, and life safety

ANORD MARDIX
A Flex Company

Emergency response and warranty

When incidents occur, response time matters. Our emergency support framework provides immediate access to expert technical guidance and rapid mobilisation of field engineers structured around site location and system criticality.

What's included

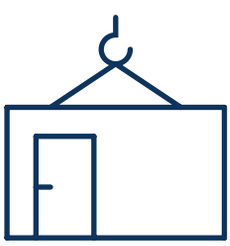

- 24/7/365 technical support access
- Emergency site attendance with target 4/6/8-hour response*
- Remote diagnostic support to accelerate fault resolution
- Next business day response options*
- Priority sourcing and coordination of replacement parts
- Structured approach to reduce mean-time-to-repair (MTTR)

*Response times vary by region and resource availability. Terms defined within agreed upon SLA.

Extended warranty coverage

Extend assurance beyond standard warranty with 1–3 year extended warranty and maintenance packages, tailored to asset age, operational profile, and project/ client requirements.

ANORD MARDIX
A Flex Company

Preparedness strategies to reduce downtime

To mitigate downtime and lifecycle risk, we take a structured approach to preparedness. Our model reduces risk through planned spares strategies, controlled partner delivery, and deep in-house engineering knowledge.

Critical spares strategy

Downtime risk increases with long component lead times. We work with you to define and maintain site-specific critical spares strategies, informed by asset criticality and failure impact.

- ✓ Reduced downtime risk through proactive stock planning
- ✓ Accelerated lead times for OEM parts
- ✓ Preferential pricing for contracted clients
- ✓ OEM-aligned spares recommendations based on asset criticality
- ✓ Faster incident resolution through pre-positioned components

Certified approved supply chain partners

Where specialist services are required, Anord Mardix manages delivery under a single service framework ensuring consistent quality, reporting, and accountability.

In-house design and manufacturing

Because we design and manufacture our equipment, we retain historic product data and engineering knowledge enabling informed modifications, upgrades, and future-proofing.

ANORD MARDIX
A Flex Company

Advanced services and engineering capabilities

Power management systems

- EMS and SCADA servicing
- Remote support
- System health checks
- System upgrades and life cycle replacements
- PMS design, maintenance and call-out support
- Network and cabling capabilities

Engineering studies

- Power quality studies

Training services

- Client product training and documentation

CASE STUDY

Critical power component replacement

ACB protection failure

Location

London, UK

Environment

Live data center

Service

Emergency response and power equipment replacement

The challenge

An issue was identified with a Micrologic 5.0X trip unit within an LV ACB. Diagnostics indicated a major internal malfunction requiring replacement.

Our response

An Anord Mardix engineer confirmed the fault condition and supported the client in sourcing a spare ACB from another site within their portfolio.

The solution

The engineer assisted with transferring accessories, installing the replacement ACB, and carrying out full testing, including insulation resistance and secondary injection testing prior to re-energisation.

Outcome

- Faulted equipment safely removed
- Replacement device tested and energised with confidence
- Power protection restored in line with manufacturer recommendations

ANORD MARDIX
A Flex Company

CASE STUDY

Emergency support

LV control system recovery

Location

UK

Service

Emergency response and follow-up repair

The challenge

During evening operations, a generator changeover failure was identified, presenting a potential risk to power resilience if left unresolved.

Our response

An Anord Mardix engineer attended site at 20:00 and carried out immediate fault investigation. A failed 24 V DC relay was identified as the root cause.

The solution

Using a spare component carried in the on-call service van, the relay was replaced on site. The system was fully tested and verified operational before handover.

Outcome

- Issue resolved at first visit
- No disruption to live operations
- System restored and verified the same evening

ANORD MARDIX
A Flex Company

CASE STUDY

Planned LV and HV isolated maintenance

Live financial data center

Location

City of London, UK

Service

LV and HV isolated maintenance

The challenge

A dual path maintenance programme was required across critical LV and HV assets within a live financial data center environment. The work demanded precise planning, strict adherence to safety procedures, and delivery within tightly controlled shutdown windows.

Our approach

Anord Mardix planned and executed isolated maintenance across both power paths in separate shutdowns:

- A-Side: 8 LV assets and 2 HV assets
- B-Side: 7 LV assets and 2 HV assets

Each shutdown was delivered by a coordinated team of **15 engineers** within a 10-hour window, following detailed sequencing and contingency planning.

Outcome

- All maintenance completed safely and on schedule
- Zero unplanned disruption to operations
- Full LV and HV asset coverage achieved across both power paths

ANORD MARDIX
A Flex Company

CASE STUDY

Integrated modular maintenance

Across a large data center campus

Location

Frankfurt, Germany

Service

Integrated modular and multi-discipline maintenance

The challenge

A large modular deployment required Year-1 maintenance across electrical, cooling, fire protection, and monitoring systems delivered without compromising availability across 34 operational PODs.

Our approach

Anord Mardix, working with approved specialist partners, delivered a coordinated maintenance programme including:

- HV live inspections of cast resin transformers and RMUs
- Cooling system maintenance across multiple DX split systems
- Fire detection and suppression servicing, including VESDA, Novec 1230, off-gas detection, and room integrity testing
- UPS maintenance for high-capacity UPS and lithium-ion battery systems
- LV and IBAR live thermal inspections

Outcome

- Multi-discipline maintenance delivered to programme
- Simplified coordination for a complex modular estate
- Clear compliance reporting and improved long-term maintainability

ANORD MARDIX
A Flex Company

ANORD MARDIX
A Flex Company

Anord Mardix, a Flex company, is a leading provider of power distribution and protection equipment to the global market. We are a vendor of choice to many of the world's core markets, from data centers to cloud computing.

With over 100 years of combined expertise we offer clients the most comprehensive product range in the industry. Our ability to customize our product offering to each project, and manufacture on a global scale, ensures reliable and bespoke end-to-end critical power solutions to all our customers, from independent providers to hyperscale leaders.
